Abstract (en)

A window sill support assembly (for positioning along the bottom edge of a window frame receiving aperture), comprises an external sill (1) member for supporting a bottom edge of a window frame (13), and an internal sill locating member (2) which is readily securable to the external sill member (3). The internal sill locating member is provided with an elongate formation (10). An internal sill member (17) may be readily located in a predetermined, for instance horizontal, position by cooperation of an edge of the internal sill member (17) with said elongate formation (10).
