Abstract (en)
The subscriber termination device comprises contacts for connecting an input line to at least one output line, these contacts being carried by an equipment support. It is characterised in that the said line connection contacts comprise first and second connection contacts (27, 28) having first ends under elastic compression in a housing (21) of a female connector (22) connected to the input line and carried by the said equipment support (4) and in that the said female connector can be selectively fitted (adapted) to male plugs of different types. <IMAGE>
