Abstract (en)
[origin: WO9318117A1] Process for preparing emulsified fuels with a high water content (5 to 35 % by weight) comprising various additives consisting of minor specific quantities of sorbitan oleate, polyalkylene-glycol and alkylphenol ethoxylate. The fuel used as ingredient is preferably diesel-oil, petrol, kerosene, fuel-oil or coal dust. The results of tests show that polluting gases can be greatly reduced during combustion of emulsified fuels. Emulsified fuels also reduce fuel combustion to a large extent.
