Abstract (en)  
[origin: EP0630827A1] The two component container has an insert small container located in the top of the main container and with the cover secured by an external clamping ring (5). The edges of the small container and the cover are rolled over to form grip lips (10,11) for the L-shaped clamping ring to be secured. The L-shape is rolled into a C-shape to grip the lipped edges and the ends of the strip forming the ring are linked by tags. The small container sits in a shaped top of the main container and is secured by a similar outer clamping ring. The clamping rings are released by removing the tags allowing the components to be cleaned and recycled.
