Abstract (en)
[origin: WO9318973A1] A device for removing wrapping strings from wrapped articles comprises an intercepting means (7) which is adapted to intercept and take hold of a separate wrapping string after it has been cut off and while the article is moved in the longitudinal direction in relation to the intercepting means. Further, the intercepting means comprises a hook means (30) which has a hooking edge (31) and which is adapted to be applied against, or be located in the immediate vicinity of, the outside of the article, and a gripping means (33) which has a gripping edge (34) and is movable between an open position, in which the gripping edge is removed from the hooking edge which thus is free to hook onto a wrapping string passing by, and a closed position, in which the hooking edge is blocked and the hooked wrapping strings are squeezed between the hooking edge and the gripping edge. A device for cutting off wrapping strings on wrapped articles is also disclosed.
