Abstract (en)

[origin: EP0631941A1] Plastic container (packaging box), formed by a rigid receptacle (2) and a lid (3), both having a peripheral rim in the shape of an inverted U, formed by two, respectively inner and outer, branches, the two outer branches being surrounded by a welded annular strip on the periphery and including rupture notches, characterised in that, on one side of the receptacle (2) and of the lid (3), the notches are discontinuous in order thereby to define, in the stacking arrangement, a non-detachable region (45) intended, after tearing off the detachable strip, to form a hinge for the lid (3) to pivot on the receptacle (2). <IMAGE>
