Abstract (en)

It is threaded on the necks (C) of bottles, flasks (F) and other containers. It is characterized in that it comprises two caplike bodies (1,2) of which one body (1) is larger and is attached over the other body (2), which is housed inside the larger one and is the one having the inner side surface threaded for fitting to the neck (C) of the pertinent container (F), said bodies (1, 2) having on one of their side contact surfaces at least one projection (3) penetrating in a peripheral slot (4) of the other and allowing the larger body (1) to rotate about the smaller one (2), at the same time preventing separation from the latter, which comprises externally an upper chase (8) for manipulation, by a key (7) or convenient tool, through an upper aperture (5) of the larger body (1). The stopper has means (10, 11) for closing the container (F) without the need of tools (7). <IMAGE>
