Abstract (en)
[origin: EP0632343A2] An electrophotographic apparatus, suitable for use in a printer, fax machine or photocopier for example, comprises a photoconductive drum 100 on which a toner image can be formed by means of a photo-exposing section 2 and a toner supply section 3. A recording medium 110, such as paper, is passed over the drum 100 and held in contact with the drum by a transferring rotary body 4 to transfer the image to the gravity-oriented lower face of the recording medium. Downstream of the drum, the recording medium enters a fixer 5, where the image on the recording medium is fixed. <IMAGE>
