Abstract (en)
[origin: EP0633193A1] A bag (1) to receive a respective article is formed by a front (6) and a central sheet section (7). Furthermore, with the rear sheet section (8), the central sheet section (7) forms an auxiliary bag (2). When the safety bag is sent by post, a rigid supporting panel (3) is inserted in the auxiliary bag (2) in order to give the safety bag a prescribed stability. The supporting panel (3) is not necessary when the bag is transported by a person. A folded-back flap (12) which adjoins the rear sheet section (8) at the top extends into the gap between the upper end regions of the front (6) and of the central sheet section (7) and prevents the article to be introduced from passing into the auxiliary bag (2). The safety bag is closed at the top by an adhesive strip (13) which connects the front sheet section (6) to the flap (12). At the bottom of the safety bag, there is an attachment (4,4) in the same plane, which serves to receive a confirmation of receipt or a franking stamp and, if appropriate, a postage stamp. <IMAGE>
