Abstract (en)

[origin: EP0633382A1] The window (7) is flush with its frame (6) at its surface towards the inside, fittings on both being accommodated in the intervening gap. The latter is masked by opposite protrusions (3,1) on window and frame, that on the latter forming a groove (2). That on the window has a rounded surface to match the groove and which is concentric to the window hinge axis (14). At the gap, the window and frame can be profiled to a depth of less than 30 mm. being formed by a triple cemented carbide milling cutter. Where of wood, the window can be in several sections for better weather protection.
