Abstract (en)

[origin: EP0633449A1] The technical field of the invention is that of safety and arming apparatuses for explosive objects of the mine type. The safety and arming apparatus (2) according to the invention, for an explosive object (1) of the mine type launched from a launch tube (3), includes at least one fuse-holder flap (4) immobilised by a latch (6) which is intended to be held by an internal surface of the launch tube, it is characterised in that it includes holding means intended to be interposed between the internal surface of the launch tube and the latch and to make sure that this latch is kept in the flap locked position by the tube. Application to the field of scatterable mines. <IMAGE>
