Abstract (en)

[origin: WO9321056A1] A device for changing the riding position in two-wheel vehicles comprising control means (20) for moving the saddle (16) and the handlebar (18) at the same time and to opposite directions according to the slope of a hill or a descent of the road so as to keep the bearing plane of the cyclist, i.e. the plane passing through the saddle and the handlebar, horizontal.
