Abstract (en)

[origin: WO9320176A1] Aqueous detergents contain an anionic surface-actif agent, alcohol or etheric alcohol as water-miscible organic solvent, ammonia or alkanolamine as alkali and a carboxylic acid having up to 6 C atoms. The equivalent ratio between alkali and carboxylic acid lies between 1 : 0.9 and 1 : 0.1. These new detergents are characterized by a high cleaning power, the absence of residues and gentle treatment of materials.
