Abstract (en)

Apparatus (10) for separating from an article (14) an outer material thereon. The apparatus (10) comprises a conveyor (12) adapted to convey the article (14) at a first predetermined velocity to a separator arrangement (18). The separator arrangement (18) has at least one surface (24) for engagement with the article (14), the surface (24) being adapted to travel at a second predetermined velocity different from the first predetermined velocity, whereby, upon engagement of the article (14) with the surface (24), the material is separated therefrom. <IMAGE>
