Abstract (en)

[origin: EP0634344A1] The invention relates to a container for selective collecting of domestic refuse, including a plurality of compartments each closed by a cover (lid) and locking means making it possible to keep said covers individually in a closed position of tilting of the container. The locking means of at least two covers (8,9) of contiguous compartments (6,7) consist of a blocking piece (12) mounted so as to pivot on the container about an axis which is substantially perpendicular to the plane of the covers (8,9), the said blocking piece being capable of pivoting between a position in which it is above one of the two covers (8) and a position in which it is above the other cover (9). <IMAGE>
