Abstract (en)

[origin: EP0634350A1] A device for transporting a roll (10) of a film material and loading it on a machine comprises: a roll-carrying cartridge (100) including, on the one hand, a frame formed from two lateral plates (flanges) (110,120) connected by spacers (130,140) and each provided with a central notch (111,121) intended to receive a spindle passing through a central opening (12) in the roll and, on the other hand, two pairs (151,152;161,162) of legs separated by a distance greater than the width of a first handling apparatus (1) on which the roll is delivered, the legs of each pair being, on the one hand, of a height such that the notches (111,121) are at a height above that of the central opening (12) in the low position of the first apparatus (1) and, on the other hand, connected by a crosspiece (170,180) of a length longer than the width of a second handling apparatus (2) intended to transport the cartridge (100). Application to the handling of supply rolls of thermoforming machines used in the agrifoodstuffs industry. <IMAGE>
