Abstract (en)

[origin: DE4323202C1] The door case produced from a profile (1) which has been angled off a number of times is provided with a groove (6), of which the opening cross-section is located opposite the end side of a door leaf (2), in the closed position thereof. The groove (6) contains a fire-protection moulding (7) which is made up of fire-protection-moulding elements (8) which can overlap and are each fully encapsulated by an aluminium foil (9). The groove (6) is closed off by a clamping moulding (10), whose surface directed away from the groove (6) is in alignment with surface parts (13, 14), of the profile (1), which border the groove (6) (Figure). <IMAGE>
