Abstract (en)

The present invention relates to a bed construction (1), with a movable netting panel (3), for preventing bed-sores from forming, comprising a bearing framework (2), to which there is connected a netting panel (3), including a central portion (4) and, on the two sides (5,6) thereof, side portions (5,6) pivoted along longitudinal axes. The bed construction (1) is characterized in that it comprises height setting elements (10,11) operating on spaced points of the central portion (4) in order to change the laying plane. Sliding rollers (20) are moreover provided, supported by the longitudinal members (21) of the framework (2) and engaging with cross tracks (22) arranged at the side portions (5,6). <IMAGE>
