Abstract (en)
The invention is for an automatic dice game consisting of a frame (1), a body (4) which can rotate about a shaft (3) mounted in the frame, a means of propulsion (5-6-7-8) for turning the body, a number of dice bodies (11) placed in the body with code carriers (14) and dice symbols, and a code reader (15) for reading the code carriers and installed between the frame (1) and the rotating body (4). The rotating body (4) is provided with a dice bed (10) for catching and locating the dice bodies next to one another (11), and the automatic dice game is provided with an optical sensor (20) and a number of detection strips (19) for placing the rotating body in the zero position and for determining the direction of rotation of the rotating body (4), with an interface unit (17) for converting the signals received from the code reader (15) into coded figures, and with a control unit with control card (18) for receiving the coded figures, for giving a stop signal to the means of propulsion of the rotating body (4) and for comparing the coded figures obtained with the predetermined winning combination. <IMAGE>
