Abstract (en)

The invention is directed to a dispensing closure which comprises : a spout element (300) adapted for being assembled with a corresponding container neck (500), and comprising a pouring spout (301), a circumscribing wall (303) defining an annular groove (305) and drain means (307), the circumscribing wall (303) comprising fastening means (315) for assembling with the container neck (500); a closure cap (100) adapted to be used as a measuring cup and equipped with fastening means (105) wherein; the circumscribing wall (303) extends like a yoke (309) over the rim of the container neck (500) and projects into a skirt (311) equipped with fastening means (319) on the inner side (317) of the skirt (311), for assembling with corresponding fastening means (503) on the container neck (500); the circumscribing wall (303) has fastening means (315) on the surface (313) oriented to the pouring spout (301); the closure cap (100) comprises an essentially tubular measuring cup (101), equipped with fastening means (105) adapted to mate with the corresponding fastening means (315) on the circumscribing wall (303) of the spout element (300); the closure cap (100) comprises a spaced surrounding secondary wall (107) which is connected to the measuring cup (101); the said secondary wall (107) extending essentially to the level of the upward surface of the spout element yoke (309) that bridges the rim of the container neck (500), when in closed position. <IMAGE>
