Abstract (en)

[origin: EP0635677A1] The invention relates to a flameholder plate (1) for a gas-mixture burner (80). This plate, which has passages (27) running through it for the circulation through it of the gases, comprises in its construction, a compressed network of interlaced metal wire(s), forming between them said passages for the gases. The plate can be produced by rolling up a band of interlaced wires, by stacking sections of band or by folding this band. Such a plate can in particular be used for being mounted on domestic burners. <IMAGE>
