Abstract (en)  
[origin: EP0635902A1] The self-stripping connector comprises a rectangular box structure with a contact terminal (10). The terminal includes two flanks which are folded up at right angles to the base, with inwardly projecting edges (32) defining a channel into which a cable may be inserted. A cable is inserted into this channel and a pair of tabs (16) at the end are folded over to retain it. The connector also includes a closed box section (24) open at one end, forming a female connector which can be fitted to a male terminal pin (12).
