Abstract (en)  
The apparatus is equipped with a printing head (1) associated with displacement members for executing a relative displacement of the printing head and of a document to be printed, in at least one direction of displacement (10), the printing head comprising a series of printing members (13) spaced from one another in the direction of displacement (10) at an effective spacing distance d greater than a reference spacing distance, whilst the displacement is executed at a rate corresponding to the reference spacing difference, so that an overlap between the successive printed bands is ensured. <IMAGE>

Abstract (fr)  
Le dispositif est équipé d'une tête d'impression (1) associée à des organes de déplacement pour effectuer un déplacement relatif de la tête d'impression et d'un document à imprimer selon au moins une direction de déplacement (10), la tête d'impression comportant une série d'organes d'impression (13) espacés les uns des autres selon la direction de déplacement (10) d'une distance d'écartement effective d supérieure à une distance d'écartement de référence tandis que le déplacement est effectué selon un pas correspondant à la distance d'écartement de référence de sorte que l'on assure un recouvrement entre les bandes successives imprimées. <IMAGE>
