Abstract (en)

[origin: EP0636488A1] A stencil discharger having a stripping means for removing a spent stencil paper (P) from the outer peripheral surface of a drum (1); a stencil holding section (9) for holding the spent stencil paper that has been removed from the outer peripheral surface of the drum (1); a transport means (4) for transporting the spent stencil paper that has been removed from the outer peripheral surface of the drum (1); a compression member (35) which is openable in the direction of transport of the spent stencil paper and provided on the transport route between the transport means and the stencil holding section, to check the transport of the spent stencil paper that has been transported by the transport means; and a push-out means (22) which opens the compression member to discharge the spent stencil paper into the stencil holding section by pushing out, from the transport means side, the spent stencil paper which has been compressed by the compression member. <IMAGE>
