Abstract (en)

[origin: EP0636743A2] Described is a process for dyeing fibrous materials made of or containing wool with anionic dyes, characterised in that these materials are dyed in the presence of a wool preservative comprising at least one compound of the formula R-O-CH₂-CH(OH)-CH₂-Y (1> where the variables are each as defined in the claims. The process makes available rub-fast level dyeings without deterioration in the quality of the wool.
