Abstract (en)

[origin: WO9412087A2] A snack preparation process allows fresh food portions to be prepared continuously or as they are ordered by exposing a flat layer of foodstuffs from several sides to direct or indirect infrared radiation with an adjustable intensity. The cooking chambers may take the form of a toaster (1) with a suspended grid (4), of absorption grilling pockets (6), of an infrared contact grilling plate (27, 28) or of grilling or frying devices provided with conveyor belts (12, 48), and they are suitable for preparing french fries and meat portions.
