Abstract (en)

[origin: EP0637468A1] The roller consists of a stirrup-shaped holder (4) for the roller, and a handle (1) which is made in two lengthwise sections (2,3) which can clip together when in use and be folded parallel to the lengthwise axis of the holder, e.g. for packaging. The handle and holder are moulded from plastics in one piece with hinges (42,43) for the two handle sections. A projection (44) on the holder engages with two cavities (11) in the handle sections when they are clipped together.
