Abstract (en)
[origin: EP0637655A2] An extruded, preferably ceramic facade panel, construction panel or decorative panel (3) has holes running in the direction of extrusion. In order to propose such a panel which is of relatively low weight, permits satisfactory and stepless dimensional adaptation transversely to the hole direction without even a single cut into one of the holes or one of the grooves having to take place, and which, moreover, ensures good channeling of water and can be produced simply and cost-effectively, the border webs (5) arranged between the border surfaces (7), running parallel to the holes (6, 8), and the border-side holes (8) are of at least double the width of the central webs (4). <IMAGE>
