Abstract (en)

[origin: EP0637668A1] A description is given of a device for closing and keeping ajar shutters of windows and the like, which device exhibits a base plate for one leaf and a bearing plate with a swivel-type bolt for the other leaf, a locking head being retained in a cutout of the base plate and/or of the bearing plate and being movable in said cutout essentially perpendicularly to the locking swivel plane of the swivel-type bolt, and the locking head being pre-stressed by a spring element arranged in the base plate and/or the bearing plate and projecting over the base plate and/or the bearing plate. <IMAGE>
