Abstract (en)

[origin: EP0637680A1] In a liquid-cooled multi-cylinder V-shaped internal combustion engine each cylinder (4-9) is enclosed by a separate coolant chamber (10-15) and a feed passage (22) and two return passages (29, 30) are provided on the insides of the cylinder banks (2, 3) for coolant ducting. In order to even out the cooling of the individual cylinders (4-9), a single feed passage (22) is arranged between the two cylinder banks (2, 3), which passage is directly connected to each individual coolant chamber (10-15). <IMAGE>
