Abstract (en)
[origin: FR2690672A1] A closure (20) for a vacuum container (10) and comprising a panel (25) and a tab (60) connected to the panel which substantially overlies a score (80). The tab is arranged so as to rupture the score when a rear portion of the tab is lifted away from the panel, thereby releasing the vacuum within the container. Access to a product within the container is then possible by simply lifting the closure.
