Abstract (en)
[origin: EP0638502A2] For removing stacks of paper from a transport track via an exit (9), a carriage (21) is provided, with which the exit (9), which directly adjoins a packaging device (41), can be opened and closed in an essentially gap-free manner. For this purpose, the carriage (21) has a closure plate for closing the exit (9), which serves simultaneously as a supporting element (20) for the essentially rigid support of the stack of paper in the region of the extended carriage (21). As a result, the associated transporter (2) can have a relatively low number of transport belts (15).
