Abstract (en)
[origin: EP0638506A2] Disc brake (10) for textile yarns (11), with a vertical hollow disc shaft (13) which supports two brake discs (14, 26) and which is mounted pivotally adjustably in a bearing plate (36) which is fastened to a brake carrier (12) and which surrounds the disc shaft (13) on the outside above the brake carrier (12) and below the upper brake disc (14). In order to improve a disc brake (10) having the features mentioned in the introduction, in such a way that soiling and particularly internal soiling is avoided, it is designed so that the disc shaft (13) and the bearing plate (36) has or have at least one air channel (50) which, on the one hand, is connected to a compressed-air source and, on the other hand, opens out at fibre-dust collecting points (51) in the region of the lower disc (26). <IMAGE>
