Abstract (en)

[origin: DE4325905C1] The invention is to enable the operators of weaving machines to equip the weaving machines according to requirements, that is to say only with the necessary number of weft-thread selection and weft-thread feed devices. The individual devices are to be interchangeable in a magazine-like manner between weaving machines. For this purpose, a spatially adjustable supporting and feeding device is combined with electromotively operated weft-thread selection and weft-thread feed devices (8). Each device (8) has at least one thread feeder (5) and each device (8) is independently connected in the manner of an interchangeable magazine to the supporting and guiding part (1, 2). <IMAGE>
