Abstract (en)

[origin: EP0638704A2] A device for preventing from insect penetration through a window with swinging or pivoted window leaf (2) comprises insect net being arranged in a peripheral frame (6) which is disposed before a window frame (1) and fastened to an outer lamella member of a group (8) of lamella members surrounding a periphery of the window frame (1). Said group (8) of the tipping lamella members comprises an outer covering lamella (12), at least one distance lamella (11) and a fastening lamella (9) which are made as rectangular frames from planar lamellic strips and which are attached on two corners thereof to pivots (10), wherein fan-like spreading of the lamella members is restricted by folded seams (13) formed on edges of the lamella strips. <IMAGE>
