Abstract (en)

A quick tripping switch, particularly for an automobile power window device, comprising: a housing (1) of plastic material containing at least two facing fixed (14,15) contacts; at least one mobile contact (22) substantially in form of a lamina, said mobile contact being power supplied and interposed between the two fixed contacts so as to engage one at a time; a control push button (2), movable against the bias of a spring. The mobile contact lamina consists of two branch portions (23,29) jointed forming an L, and is pivotally mounted proximate to its angle on its branch portion engaged by the control push button. <IMAGE>
