Abstract (en)

[origin: WO9322761A1] A sound-generating reed for wind instruments made of fiber-reinforced plastics is characterized in that the base plastic substance is stabilized by at least one layer (27, 29) having fiber strands (31) that extend in a single direction in the longitudinal direction of the reed (7). The individual strands (33) of fibers have different material properties in order to dampen the vibrations of the reed (7).
