Abstract (en)
[origin: EP0639345A1] The invention relates to a moulded shower enclosure formed in three parts one above the other, and including a base part (13), a central U-shaped part (14) and a top part (15). The enclosure has a base (25), defining a waste outlet (30), and a back (18) and two side walls (16, 17) and has no vertical joints or seams. Support feet (26) project downwardly from the base for supporting the enclosure on the ground so that waste pipes (31) can be located between the base and the ground (27). The parts (13, 14, 15) are formed at their mating surfaces by connectable and disconnectable fixing means (47, 48), so that the enclosure has its own structural stability. <IMAGE>
