Abstract (en)

[origin: EP0639432A1] For the precise determination of the position of mitre cuts in frames or profile frames, preferably for doors or windows, the invention provides a marking-out frame (14) comprising two members (1, 3) capable of being aligned parallel to one another and displaced relative to one another, as well as a third member (2) running perpendicular to the two parallel-aligned members (1, 3). The members are furnished with measurement scales (7) in the longitudinal direction. A slide (4) with a protractor (5) and a marking-out ruler (6) can be mounted on the members (1, 2, 3) and displaced along them. <IMAGE>
