Abstract (en)  
[origin: EP0639453A1] The invention relates to a device for cross-perforating for a folding apparatus equipped with two cross-folding devices, having two perforating cylinders which are arranged upstream of the cross-folding devices and are equipped with perforating knives and perforating strips cooperating in each case in pairs. For an adjustment of the device during machine running: I one perforating cylinder (5) is in two parts and one perforating cylinder (6) is in one part II or both perforating cylinders are in two parts III or both perforating cylinders are in three parts having in each case an adjustment suitable in terms of position with respect to the cross-folds: I of all perforating knives (13; 15; 16) II of all perforating knives (13; 15; 16) and the perforating strip (14) assigned to the first cross-fold III of all perforating knives (13; 15; 16) and perforating strips (14; 17; 18).
