Abstract (en)
[origin: WO9420813A1] The technical field of the invention is that of telescoped-round type ammunition. The ammunition according to the invention comprises a case consisting of a cylindrical envelope (2) carrying at each end a cap (3a, 3b), and within which are disposed a projectile (8) and a propellant charge. Means are also provided for axially holding in place the projectile in relation to the envelope, said means consisting of a cover (16) which is integral with the front part of the projectile (3) and carries an annular flange (19) made integral with the front cap (3a) with the aid of securing means. Application in weapons.
