Abstract (en)

[origin: EP0640311A1] The invention relates to a device for packaging, transporting and dispensing controlled doses of granular or powdery goods, in particular a food product. A changeable container (1) of relatively large volume and capable of being closed gastightly and a portioning device (2) can be connected to each other by coupling elements (13) constructed, on one side, at an opening of the changeable container (1) and, on the other side, at an opening of the portioning device (2), the portioning device (2) having electric control means for the dosed dispensing of goods. Both the changeable container and the portioning device with its actuating means (3) can be used as often as desired. A coding, e.g. a magnetic strip card (7), can be assigned to the changeable container, cooperating with scanning elements (8), provided in the circuit of the portioning device, to enable the electric control system. <IMAGE>
