Abstract (en)

[origin: WO9421264A1] At least one glucocorticoid is used to provide a drug for treating HIV infection and preventing AIDS, in particular in a patient infected with HIV-1. A pharmaceutical composition provided for this purpose includes, as the active principle, at least one glucocorticoid and/or a salt or other pharmacologically acceptable derivative thereof, particularly prednisone or prednisolone, in an amount of around 1 mg to 1 g per unit dose.
