Abstract (en)

[origin: WO9323521A1] A process is disclosed for producing pasty washing agents. Soap is incorporated into a heated mixture of non ionic and anionic surfactants and this mixture is mixed after it cools down with the remaining components of the washing agent, for example builders and bleaching agents. The thus produced washing agents, which contain little or no water, are stable against sedimentation and even after a long storage time lose no significant amounts of active oxygen.
