Abstract (en)

[origin: WO9324723A1] The invention concerns a lock (1) opened by the insertion of a partially magnetized code card (8) and proposes, in order to produce a particularly user-friendly design, that a store (S) be fitted which is initiated in the lock-release position and which can be deactivated without neutralizing the lock-closure function and which, in use, stores, in such a way that the store can be interrogated, card code data in relation to other, absolute, data such as date and time of insertion of the card for a multiplicity of card insertions.
