Abstract (en)

[origin: DE4326022C1] There is proposed a seat of a surgeon's stool whose seating surface is formed from a large number of elastic or partially elastic supporting elements (1 to 8) which are arranged close to one another. These elements sit in bores (9) in a carrier member (10). The supporting elements (1 to 8) have different heights and are distributed over the seating surface appropriate for anatomically correct support.
