Abstract (en)

[origin: EP0641646A2] The pipe-coupling device for a corrugated-roll cassette within a simple face station comprises a first plate (30) integral with the cassette (10) in which sockets or plugs (50) are mounted. Each socket or plug is connected via a rigid conduit (4, 5, 6, 7) in the cassette to a connector (92) located at the level of the roll journals. The plate is oriented in the sense of insertion displacement of the cassette in the working position. A second plate (40) integral with the frame (20) is oriented opposite the first plate. Complementary sockets or plugs (60) connected to rigid supply or discharge conduits (1, 2, 8, 9) of the pipe are mounted in this second plate. <IMAGE>
