Abstract (en)

[origin: EP0641712A1] The apparatus comprises a decompression device (9) in communication with sucking means (3,10) which can be unrolled, an intermediate vessel (6) for the provisional storing of the waste liquids sucked during a single sucking phase and a final storage vessel (8) for the storage of the waste liquids sucked during a plurality of sucking phases. The sucking method comprises a first phase of payment in advance, a sucking phase of the liquids from said watercrafts into said intermediate vessel started by said payment phase and a storing phase at the end of said sucking phase. The apparatus has a reduced encumbrance and costs and it allows the payment in advance of the sucking operations. <IMAGE>
