Abstract (en)

[origin: WO9324197A1] The invention relates to a bar support device for hurdles or the like for horse sport. Said device, comprising at least one bar (4) supported at each of its extremities by cradles (6, 8) fixed to crutches (2), is characterized in that it is provided with a guide (12) associated to the crutch (2), a slide (10) supporting at least one cradle (6, 8) and actuation means (14) for operating the combination formed by the guide (12) and the slide (10) in order to vary the position of the slide (10) along the guide (12).
