Abstract (en)
[origin: CA2136453A1] A reusable packaging system has a plastic container for receiving objects. The container (1) consists of separable elements (2,3), such as tray-like base and top elements (2) and wall frame elements (3), constituting module elements in a modular system. The module elements (2,3) have an element-compatible interface configuration at their periphery such that different module elements of the system, and in particular also elements external to the module system defined according to form, size and design of the individual modules, may only be joined to other module elements via the compatible interface configuration.
